I am a self-motivated professional web developer with huge knowledge and proficiency in JavaScript, HTML , CSS, React, Nodejs, PHP, Mysql, Mongodb, Nestjs, Nextjs, Graphql and mobile responsive web development, as well as strong skills and ability in writing clean and efficient code.
I am dedicated to perfecting my craft by learning from more seasoned developers, and IT professionals, staying humble, and continuously making strides to learn all that I can about software development. My goal is to add more value to your company and business through my hard work.

Willing to relocate: Anywhere
Sponsorship required to work in the US

Work Experience

Backend Developer
L'Agence Digital - Yaoundé
December 2021 to May 2023

1. Developing and maintaining server-side logic: As part of a robust and dynamic team, I was responsible for writing server-side logic and maintaining code for new functionalities on the applications I worked on.
2. Database management: I was also responsible for writing scalable database schemas and managing our database in an efficient way so as to avoid poor code that could make applications vulnerable to attacks.
3. Troubleshooting and bug fixing: 40% of my job had to do with troubleshooting and debugging applications that were transitioning from legacy code to new and improved code. This was by far the best and most painful part of my job but I enjoyed every bit of it.
While at this job, I mostly worked on developing and maintaining a hospital management system we built for some hospitals in Cameroon. It was a very big project and we had lots of successes with it. I also had the opportunity to collaborate and work with as many as 15 developers on a day to day basis. Technologies we used include: PHP, MySQL(AND Microsoft sql), Codeigniter4, Docker, Jquery, Vanilla Javascript, HTML5, CSS3 and Gitlab as our version control system.

Lead Developer
Zoom-sportz - Buea
August 2021 to November 2022

Zoom-sportz is a soccer news start up focused on providing their users with unbiased soccer news as well as real time live scores data for matches, player stats and so much more.
They deliver their services through zoom-sportz.com, a web site I built. I was able to accomplish the following:
• Designed and built the user interface for their website,
• Built a robust and scalable back-end, with a simple database that allowed for easy communication with the front-end,
• Implemented authentication and security to help secure user data,

• Helped them save time and money by storing user generated assets in an AWS S3 Bucket

Technologies used: HTML5, CSS3, JAVASCRIPT, REACT, NODEJS and EXPRESS, MONGODB, JQUERY, Amazon S3, GIT for version control.

Full Stack Developer
CNPS Lodge - Yaounde - Cameroon
June 2022 to September 2022

I worked at Cnps Lodge, Yaounde as a full-stack developer for their logistics app.
While on this job, I accomplished the following.
• Redesigned the user interface of their application,
• Built a rating system for the app,
• Implemented a quick search interface to enable easy search of users

Technologies used: HTML5, CSS3, JAVASCRIPT, PHP, JQUERY, MySQL, AJAX, GIT for version control.

Lead Web Developer
what2watch.net - Yaounde
May 2020 to June 2021

what2watch.net is a movie website aimed at helping users decide what movies to watch and where to watch in a hassle-free way by providing them with all the information they need. I built this web app from ground up(front end and back end) and I'm currently adding new features to it. The end goal is to make it a movie streaming site with stunning UI like Netflix which communicates with a strong back-end to deliver a rich User experience.
What I do/Achievements:

• Designed and developed the movie web app,
• Responsible for the implementation of responsive mobile-first web pages which since the creation of the web app has increased mobile traffic by over 60%,
• Debug issues on a weekly basis while maintaining the code,
• Designed and developed it's blog website (what2watch.net/blog/posts),
• Carry out UI/UX research for a continuous improvement of the UI and UX across web pages,
• Manage user generated assets with Amazon S3

Technologies used: HTML5, CSS3, JAVASCRIPT, NODEJS, AJAX and EXPRESS, MONGODB, JQUERY, Amazon S3, GIT for version control.
